

TDVision Systems Inc.

TDVision is the owner of several 3D related patents and proprietary system architectures to propel the true 3D media breakthrough.

Our technology allows true 3D content to be acquired directly using our TDVCam or emulated by using our TDVirtualCam algorithm. The content is stored, transferred and processed by an ordinary PC.

The resulting image is then displayed by our TDVisor. Three resolutions are available 800x600, 1024x768 and 1280x720p.

The result is the user is immersed in a true 3D experience, like the real world.
