

# Business Model

## Take your products and applications to the next logical step: True 3D visualization.

TDVision has created two different techniques for the adoption of our technology depending on the final application. For the Consumer Electronics market we can have a license agreement and provide support to adopt our technology architecture, and for professional applications like Medical, Military and Education our strong R&D team can develop a custom project to integrate TDVision capabilities into your applications.

### LICENSING

By becoming a Licensee and adopting our technology into your applications or videogames you will enable your products with impressive true 3D capabilities, turning them into a TDVReady product. The final user will enjoy a true 3D immersive experience for different applications. TDVision technology will propel the creation of new markets and applications and you as a Licensee can be benefitted by offering an unparalleled cutting edge technology embedded into your products.

Your company just has to invest a one time setup license fee and once the product has become a licensed TDVReady product then it becomes a royalty based product.

Due to the fact that TDVision is interested on promoting the adoption of our technology we need to maintain a certain performance and growth rate so different quarterly progress reports and records should be presented every three months.

As all the typical licensing methods, and based on the reports, a previously agreed percentage is paid to TDVision as royalties.

### CUSTOM PROJECTS

Full integration of TDVision's technology can be realized by the highly qualified R&D team at our company. Software simulations, visual pattern

recognition, remote training, remote controlled applications and a virtually infinite number of applications can be benefitted by the integration of our technology.

Just contact our R&D department to get a Systems Engineering and preliminary project session to learn how TDVision can dramatically enhance your existing application.

### TDVAlliance

By becoming a member of the TDVAlliance and supporting the adoption of our technology, some special benefits can be obtained, please ask our executives for more information.

You can Purchase a commercial exclusive or non-exclusive license for the usage of our Intellectual Property, or we can work on integrating our products and applications for a specific project:

TDVisor	and all our trademarks like:
TDVCam	TDVReady
TDVirtualCam	TDVision
TDVSDK	TDVAlliance
TDVPlugins	
AlterSpace	
DejaView
